

PENTERRA SCALPING VERSION

PENTERRA SCALPING VERSION

CARRÉ has positioned itself as a leader in the field of soil cultivation, drawing on more than 35 years of experience in the design and manufacture of vibratory cultivators.

The [PENTERRA](#), a multi-purpose vibro stubble cultivator, is now available in a version that allows stubble cultivation by scalping from 3 to 10 cm deep.

The 80x12mm tine is fitted with a spring-loaded blade to ensure a flat coulters position for quality scalping.

The choice of 125, 150 or 175mm tine spacing, combined with a 200 or 250mm triangular coulters, ensures an ideal cutting area for stubble and weeds. The carbide ploughshare option is also available to reduce wear on hard ground.

Precise depth control is guaranteed by pairs of double wheels positioned at the front of the machine, thus avoiding any risk of blockage in difficult conditions.

A triple row of combs ensures that the roots are exposed to accelerate the drying out of the residues and avoid the risk of transplanting.

The control wheels and comb harrow are available in mechanical or hydraulic settings for greater ease of use.

Range available from 3 to 7m in mounted or semi-mounted version on folding model.
