

# The CARRÉ ROTANET rotary hoe with a brand new chassis

## The CARRÉ ROTANET rotary hoe with a brand new chassis

CARRÉ, a French company specialising in soil cultivation and leader in the mechanical weeding market, wishes to make the most of all its knowledge and know-how in order to provide farmers with new products.

The notoriety and efficiency of the [ROTANET](#) rotary hoe for high-speed hoeing and weeding is no longer in question.

With more than 12 years of experience with the rotary hoe, CARRÉ has designed a brand-new chassis for its [ROTANET](#), which makes it easy to position the digging wheels at the desired track from 1.5m to 2.15m. A transport width of 3m00 as well as a double hydraulic and mechanical safety system guarantees maximum safety during transport.

The option of rear **Proline** combs, a system patented by CARRÉ, finishes the work already done by the hoes in order to crush and position the roots of weeds on the surface of the soil.

The range has been extended and is now available from 3m to 12.40m in the reach version.
